### 3 Phase Stepper Motor Motor

A stepper motor rotates with a fixed step angle, just like the second hand of a clock. This angle is called "basic step angle." MOONS' offers several types of "basic step angle" as standard motors: 2-phase stepping motors with a basic step angle of 0.9° and 1.8° and 3-phase stepping motors with a basic step angle of 1.2°.

Three-phase stepper motors are useful in applications that require very-high resolution (micro-stepping) as well as minimal noise and vibration. This TIDA-01362 design achieves all of these requirements by driving a three-phase stepper motor using Texas Instruments DRV8313 brushless DC (BLDC) motor driver.

A stepper motor, also known as step motor or stepping motor, is a brushless DC electric motor that divides a full rotation into a number of equal steps. The motor's position can then be commanded to move and hold at one of these steps without any position sensor for feedback (an open-loop controller), as long as the motor is carefully sized to the application in respect to torque and speed.

You can smooth things out a lot with a flywheel. I built a shock dyno, used a 20hp 3 phase motor with a vfd. 5' 3 groove pulley driving a 17" pulley on the jack shaft driving a scotch yoke with 1", 1.5" and 2" of shock travel. you could see the 3 ph sine wave in the data until I added a 15" diameter 125 lb flywheel to the jack shaft.

There are two key differences between 2-phase and 5-phase motors. The first is mechanical. A hybrid stepper motor consists of basically two parts, a stator and a rotor. The rotor in turn is made up of three components; rotor cup 1, rotor cup 2 and a permanent magnet. In a 2-phase motor the stator is made up of 8 magnetic poles with small teeth, while the 5-phase motor stator is made up of 10 ...
