Manual vs. Automatic Transmission | Digital Trends

A car needs a full working transmission (or gearbox) in order to allow the vehicle to change gears, but the inner workings of a vehicle differs greatly between a manual transmission car and an automatic transmission car. A manual car is recognisable from the inside, as it contains a clutch pedal, which is used to change gears, as well as a gear shift stick between the two front seats, which offers full control of the car and between 5-6 gears and reverse.

Manual vs. Automatic Car Transmission: Which is Best?

To be clear, an automated manual transmission (AMT) doesn't have a clutch pedal; there's only an accelerator and a brake pedal, just like a regular automatic. And if you leave an AMT in D mode, it basically performs like an automatic transmission — all you have to do is worry about when to start and when to stop.
