Engine Question And Answer

Main Difference -
Internal vs External
Combustion Engine.
Internal and external
combustion engines
are two types of heat
engines: they convert
thermal energy into
mechanical energy.
The main difference
between internal and
external combustion
engine is that in
internal combustion
engines, the working
fluid burns inside the
cylinder, whereas in

Get Free Internal Combustion

Engine Question And Answer

external combustion engines, combustion takes place outside the cylinder and heat is then transferred to the working fluid.

Difference Between Internal and External Combustion Engine
