Nursing Concept Map Acute Renal

Acute renal failure (ARF), also known as acute kidney failure or acute kidney injury, is the abrupt loss of kidney function. The glomerular filtration rate (GFR) falls over a period of hours to a few days and is accompanied by concomitant rise in serum creatinine and urea nitrogen. If left untreated, acute renal failure may complicate to chronic renal failure.

In nursing, it can be applied when creating a concept map. A concept map is a diagram that shows a patient's problems, nursing interventions that can address the problems and the relationship between the two concepts. Applying critical thinking to a concept map helps the nurse see what the patient's needs are, so that she can make the right decisions concerning patient care.
